

Established May 1987, situated in Bergen Norway

Norske Ventiler AS was founded in May 1987 at Ågotnes on the west coast of Norway. Three young local experts from within the off shore north sea oil industry started the company as a manufacturer and supplier of small instrument valves. Since then we have developed to cover ball, check, globe, modular valves and various special valves.

Custom made valves to the global on and offshore market

BB&E Reklambyrå

High competence, top quality and fast delivery

Norske Ventiler AS design, manufacture and supply ball, check, gate, globe, combination and tailor made valves in materials such as titanium, super duplex, 6Mo and other nickel alloys.

We deliver worldwide to the petrochemical, oil production (both on and offshore), oil refineries and gas storage industries, as well as other industrial process customers.

VALVES: Air-release valves - Ball valves - Check valves - Double Block & Bleed Combination valves - Globe valves - Gate valves - Injection and Sampling Quills - Needle valves
Manifolds: 2, 3 and multi ways - Y-Strainers - NFPA 20 Sea Water Harness END CONNECTIONS: RF - FF - RTJ - SW - BW - SCR - WAFER - SAE - or any combination

Our valves are designed and manufactured in house

Our engineering and production personnel have a long and wide experience of the construction and production of valves, with all departments being actively involved in the constant improvement of our valves and internal processes.

Our production is based on customer orders, therefore we are specialists in short deliveries.

Norske Ventiler AS is known as a flexible and customer orientated supplier of high quality valves with short delivery times. Our location close to the North Sea Sector enables us to develop our own designs in close cooperation with the oil companies operating here, and helps us understand the special needs they have due to a better knowledge of the harsh environment in which they work.

We have extensive experience of the construction and production of valves

Norske Ventiler AS are at the forefront of the development and design of valves, specializing in tailor made solutions that we develop in close cooperation with our customers.

A keen understanding of the markets needs and expectations is vital for all of our staff. Our production expertise, combined with highly skilled, trained and motivated staff, who are proud of their achievements, makes us the premier supplier of high quality valves in short delivery times.

In the year 2000 the company moved into a new and modern plant at Agotnes, outside Bergen, equipped with a modern production line containing CNC machines. The combination of valves produced in house now covers ball, check, globe, needle, modular and various special valves.
